

Concrete and Brickwork Repairs on Lewisham Homes

Working in conjunction with the main contractor **Mitie**, Gunite was employed to investigate and advise on the extent of concrete repairs required across a number of high and low-rise buildings throughout the London Borough of Lewisham.

Based on our recommendations an estimated repair value was proposed. Mitie then erected scaffolding, thereby allowing us to complete hammer test surveys and firm up our quotation.

The repairs were then broken out and repaired using **Flexcrete** repair materials.

Our scope of works include:

- Survey
- Concrete repairs
- Brickwork repairs
- Mastic to window frames

All contracts have been carried out with residents in occupation.
